

# DOING *your* PART ON COVID?

**People have a lot of fears about being vaccinated.**

Ultimately it is a personal decision. However, as one of the largest public health organizations in the world we are appealing to you to do so.

**Life is a balance of benefits and risks.**

If you don't take the vaccine you have a much higher risk of getting COVID 19, falling ill and dying than if you do - that is a fact.

If you get vaccinated, you could have minimal side effects, you could still get infected since it will take time to generate immunity and you may still infect others. However, you won't need hospitalization or die and you will play a significant role in stopping this pandemic and saving humanity.

**We are in a race against time.**

COVID is rapidly mutating. We have already lost so much valuable time. We must get ahead of this virus ASAP.

You may feel you have good reasons not to get the shot or you may just be scared. Either way you are hurting yourself, your loved ones and humanity by abstaining.

The approval process in this country was rigorous. Millions have already received injections with few serious reactions.

Those of us who are fortunate enough to live in a place where it is available should not waste this opportunity.
